

Installer - Bug #12498

As a user, I want foreman-installer to provide a scenario for installing a capsule

Pull request:	
Description	
This is an enhancement to leverage the Kafo changes provided by http://projects.theforeman.org/issues/10162 to support a 'capsule' scenario.	
E.g.	
<pre>foreman-installer --scenario capsule \ --capsule-parent-fqdn "katello.example.com"\ --foreman-proxy-registered-proxy-url "https://capsule.example.com:9090"\ --foreman-proxy-oauth-consumer-key "Q5J2qCGV3zWyohCJfKxQBDCCjceBiTMy"\ --foreman-proxy-oauth-consumer-secret "DGKBJjXWfkyroiYDHNhYAFn9uTnUcJxa"\ --foreman-proxy-foreman-base-url "https://katello.example.com"\ --foreman-proxy-trusted-hosts "katello.example.com"\ --foreman-proxy-trusted-hosts "capsule.example.com"\ --capsule-pulp-oauth-secret "bQ5zUPVd2qVDY987D4VtD6Va9pDj4Y7J"\ --capsule-certs-tar "~/capsule.example.com-certs.tar"</pre>	
Note: we may decide to change the name from 'capsule' to something different; however, we need a way to install a scenario that includes the components required by katello (e.g. pulp, reverse proxy...etc)

Is this not something in Katello, and Foreman uses smart proxies ([#11735](#))?
