<b>Description</b>		
I use these parameters with foreman-installer : foreman-installer --foreman-ipa-authentication=true --foreman-pam-service=foreman-prod		
The keytab is retrieved and is in /etc/httpd/conf/http.keytab The pam service is created and is in /etc/pam.d/foreman-prod		
But the config file /etc/httpd/conf.d/05-foreman-ssl.d/auth_kerb.conf is not correctly generated : Krb5KeyTab line has no value require pam-account has no value		
systemctl status httpd : Syntax error on line 9 of /etc/httpd/conf.d/05-foreman-ssl.d/auth_kerb.conf: Krb5KeyTab takes one argument, Location of Kerberos V5 keytab file.

##### Revision 83784984 - 07/12/2016 04:25 AM - Dominic Cleal

fixes #15642 - interpolate out of scope IPA-related variables

#### History

##### #1 - 07/11/2016 08:59 AM - Dominic Cleal

- Project changed from Foreman to Installer
- Category set to Foreman modules
- translation missing: en.field\_release set to 161

The templates/auth\_kerb.conf.erb template appears to rely on having variables in-scope, but the variables it's accessing are defined in the foreman class and not foreman::config where it's used. The template also has no test coverage.
