

Installer - Bug #16240

module_enabled? in post hook returns true when module is disabled

08/23/2016 05:49 AM - Stefan Heijmans

Status:	Closed	
Priority:	Normal	
Assignee:	Dominic Cleal	
Category:	foreman-installer script	
Target version:	1.13.0	
Difficulty:		Fixed in Releases:
Triaged:		Found in Releases:
Bugzilla link:		Red Hat JIRA:
Pull request:	https://github.com/foreman/foreman-installer/pull/195	

Description

After an install of foreman 1.12.1 with just foreman/foreman-cli selected, it shows at the end that the foreman-proxy and puppetmaster are also running.

```
foreman-installer -i
  Main Config Menu
  1. [ ] Configure foreman
  2. [ ] Configure foreman_cli

 39. Display current config
```

```
40. Save and run
41. Cancel run without Saving
Choose an option from the menu... 40
Installing          Done [100%] [.....]
.....]
Success!
* Foreman is running at https://<fqdn>
  Initial credentials are admin / L2VqcCgu8TbeSQEW
* Foreman Proxy is running at https://<fqdn>:8443
* Puppetmaster is running at port 8140
The full log is at /var/log/foreman-installer/foreman.log
```

These 2 lines should not be displayed, correct?

```
* Foreman Proxy is running at https://<fqdn>:8443
* Puppetmaster is running at port 8140
```

fixes #16240 - use module_enabled? in hook for correct status

History

#1 - 08/23/2016 06:04 AM - Dominic Cleal

- Project changed from Installer to Kafo
- Subject changed from Foreman 1.12.1, installing only foreman & foreman-cli, shows also that the foreman-proxy and puppetmaster are running, while they are not installed by foreman-installer. to module_enabled? in post hook returns true when module is disabled

This is reproducible on the first run when disabling a module either through the CLI args or through interactive mode (above).

foreman-installer has a post hook containing:

```
if @kafo.config.module_enabled? 'puppet'
```

This is returning true (and internally, the @data variable in module_enabled? contains a Hash) when the module has just been disabled. On subsequent runs it returns false.

#2 - 08/30/2016 08:03 AM - Dominic Cleal

- Blocked by Feature #16381: Provide module_enabled? helper in hook context added

#3 - 08/30/2016 08:03 AM - Dominic Cleal

- Project changed from Kafo to Installer
- Category set to foreman-installer script
- Status changed from New to Assigned
- Assignee set to Dominic Cleal

I think this is actually working as designed, it's just that the hook isn't querying the PuppetModule object that contains the live state about enabled/disabled. #16381 will add a helper to Kafo to make this easier from the hook.

#4 - 09/01/2016 06:08 AM - The Foreman Bot

- Status changed from Assigned to Ready For Testing
- Pull request https://github.com/foreman/foreman-installer/pull/195 added

#5 - 09/01/2016 07:01 PM - Dominic Cleal
