Description

The registration code for smart proxies searches by name, and it requires the name of the
proxy be the FQDN. The actual field that's unique is the URL, we should probably
search by the URL instead.

History

#1 - 12/13/2016 10:33 AM - Stephen Benjamin

- Project changed from Foreman to Installer

*- Subject changed from Re-running foreman-installer on a proxy results in "URL Only one declaration of a proxy is allowed"
to Re-running foreman-installer on a proxy results in "URL Only one declaration of a proxy is allowed"*

- Category set to Foreman modules

#2 - 12/13/2016 10:33 AM - Stephen Benjamin

- Priority changed from High to Normal

#3 - 12/13/2016 10:34 AM - Stephen Benjamin

Correction: name is unique too, but the user could have named it differently, so the registration won't find the proxy that way. URL should be likelier
to be the same, although not if the changed the port.
