<b>Pull request:</b>	
<b>Description</b>	
<p>Long running installation or upgrade tasks are probably best run under screen/tmux/etc. Surprise network disconnects may terminate the process mid stream and leave the system in an unknown state.</p> <p>Can the foreman-installer be enhanced to warn (or even error with a switch to disable error) if it was run from a non screen/tmux/etc session?</p> <p>I believe if ENV['STY'] is set, there is some sort of terminal multiplexer involved.</p>

I'm really against nannying users/admins here.
