

Installer - Bug #20447

--foreman-db-manage=false not honored

07/31/2017 03:25 AM - Qingbo Zhou

Status: Feedback	
Priority: Normal	
Assignee:

Target version:	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases: 1.15.2
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
<p>If I set --foreman-db-manage=false when running installer, it still tries to install a database (PostgreSQL in my case). I observed this on both Ubuntu 16.04 and CentOS 7.</p>	
Answers:	
<pre>@\$ grep db_manage /etc/foreman-installer/scenarios.d/foreman-answers.yaml db_manage: false db_manage_rake: true @</pre>	
params.pp (this seems to be a generated file?):	
<pre>@\$ grep db_manage /usr/share/foreman-installer/modules/foreman/manifests/params.pp \$db_manage = true \$db_manage_rake = true @</pre>	

History

#1 - 08/02/2017 02:29 AM - Qingbo Zhou

- Subject changed from --foreman-db-manage not to --foreman-db-manage=false not honored

#2 - 08/06/2017 06:05 AM - Anonymous

Before I try to reproduce this, do you run the installer described like in <https://theforeman.org/manuals/1.15/index.html#3.2.3InstallationScenarios> "Using an external database server"?
