Installer - Tracker #20850

Allow split deployments using the installer

09/05/2017 08:24 AM - Ewoud Kohl van Wijngaarden

Difficulty:			**Fixed in Releases:**	
Triaged:	Yes		**Found in Releases:**	
Bugzilla link:			**Red Hat JIRA:**	

Description

The goal is to be able to deploy all aspects of a Katello installation on separate machines:

- Candlepin
- Pulp
- Qpid
- Application
- Content Proxy

There are also options to use external databases but deploying just the external databases using the installer is (initially) out of scope.

Initial experiments show that this can generally work but there are assumptions in the code that assume they are on the same machine.
