Foreman - Support #22333

Gets WebSock error: [object Event] while configuring vmware console in foreman

01/19/2018 01:53 PM - rohan gadalkar

Status:	New		
Priority:	Normal		
Assignee:			
Category:	Compute resources - VMware		
Target version:			
Triaged:		**Found in Releases:**	
Fixed in Releases:			

Description

1) selinux is disabled
2) webssl certificates are mapped as required like this# Websockets
:websockets_encrypt: on
:websockets_ssl_key: /etc/pki/tls/private/xyz.com.key
:websockets_ssl_cert: /etc/pki/tls/certs/xyz.com.crt
3)vnc file on vmware host is configured to open the required port for communication.

but we have not installed net-tools on vmware host machine . Is it causing us this error ??

- Tracker changed from Feature to Support

- Category changed from Web Interface to Compute resources - VMware

Foreman picks **random** VNC port from range 5901-5965 you need to open all these ports on your hypervisor, make sure they all work. Then you need to have 5910-5930 range opened on the Foreman server, that is also picked randomly.

We also introduced VMRC protocol for VMWare in upstream, will be part of the next release.
