Description	
Hello,	
foreman-installer is failing when adding the parameter: 'server_ssl_chain' to the foreman-answers.yaml file, With the below error: https://pastebin.com/x9xVmyZz	
The foreman-answer file contains:	
server_ssl_port: 443	
server_ssl_ca: /etc/puppetlabs/puppet/ssl/certs/ca.pem	
server_ssl_chain: /etc/pki/tls/certs/RHChain.cer	
server_ssl_cert: /etc/puppetlabs/puppet/ssl/certs/foreman.eng.lab.tlv.redhat.com-2017.crt	
server_ssl_certs_dir: "	
server_ssl_key: /etc/puppetlabs/puppet/ssl/private_keys/foreman.eng.lab.tlv.redhat.com-2017.key	
server_ssl_crl: /etc/puppetlabs/puppet/ssl/crl.pem	
server_ssl_protocol:	
client_ssl_ca: /etc/puppetlabs/puppet/ssl/certs/ca.pem	
client_ssl_cert: /etc/puppetlabs/puppet/ssl/certs/foreman.eng.lab.tlv.redhat.com.pem	
client_ssl_key: /etc/puppetlabs/puppet/ssl/private_keys/foreman.eng.lab.tlv.redhat.com.pem	
<ul style="list-style-type: none">• Verified - no error appear when removing the chain and changing the certs back to the internal ones• Verified - this specific answer file worked perfectly when I have puppet-server 3 installed. After upgrading to puppet4, it breaks	

History

#1 - 07/29/2018 04:31 PM - Dor Pinhas

Another note - even though installer failed - certificates, ca, chain seems to be working on the foreman instance itself.

#2 - 07/30/2018 12:31 PM - Ewoud Kohl van Wijngaarden

- Status changed from New to Rejected

This is to be expected. When changing the certificate of Foreman you also need to set --foreman-proxy-foreman-ssl-ca and --puppet-server-foreman-ssl-ca.
