Description

Hey, we have a new smart-proxy module available in 1.20+ and this configuration needs to be puppetized:

```
---  
# Enable publishing of a given directory under /EFI and /httpboot paths.  
# Directory listing is not possible, symlinks are followed but not outside  
# of the root directory specified in this file.  
  
# Enables the module, make sure to enable TFTP module as well to allow  
# configuration files deployment.  
:enabled: true  
  
#:root_dir: /var/lib/tftpboot
```

Fixes #25590 - Add httpboot support

This adds support for the httpboot module that's shipped since 1.20. It's added under advanced since the default value is derived from whether tftp is enabled, but can be explicitly enabled. Its root dir is also hardcoded to the tftp directory.

History

#1 - 11/30/2018 08:22 AM - Lukas Zapletal

- Related to Feature #24631: Implement httpboot module added

#2 - 02/28/2019 12:55 PM - Jan Hutař

- Bugzilla link set to 1684108

#3 - 02/28/2019 02:39 PM - Ewoud Kohl van Wijngaarden

- Target version set to 1.22.0
- Triaged changed from No to Yes

This needs a cherry pick into 1.21.1 and probably 1.20.3 as well.
