Description	
When the installer finishes, the output looks like this:	
<pre>Success! * Foreman is running at https://centos7-foreman-1-21.kangae.example.com * Foreman Proxy is running at https://centos7-foreman-1-21.kangae.example.com:8443 * Puppetmaster is running at port 8140 The full log is at /var/log/foreman-installer/foreman.log</pre>	
But I am used to see the initial creds in the output	
<pre>Success! * Foreman is running at https://centos7-foreman-1-21.kangae.example.com Initial credentials are admin / changeme * Foreman Proxy is running at https://centos7-foreman-1-21.kangae.example.com:8443 * Puppetmaster is running at port 8140 The full log is at /var/log/foreman-installer/foreman.log</pre>
