

Installer - Bug #26905

katello nightly installation fails due conflict with mongodb package from epel repo

05/28/2019 03:10 PM - roman plevka

Status:	Resolved

Difficulty:		Fixed in Releases:
Triaged:	Yes	Found in Releases:
Bugzilla link:		Red Hat JIRA:
Pull request:		

Description

When trying to install katello nightly (with epel repos):
there is a stage that fails on trying to install mongodb-client:

```
/Stage[main]/Mongodb::Client/Package[mongodb_client]/ensure: change from 'purged' to 'present' failed
```

...

```
Error: rh-mongodb34-mongodb-syspaths conflicts with mongodb-2.6.12-6.el7.x86_6
```

the issue seems to be with the following module:

```
/usr/share/foreman-installer/modules/mongodb/manifests/client.pp
```

this error won't crash the installer, It actually finishes with: "success".

reproducer:

- enable satellite maintenance repo
- get forklift

```
- ansible-playbook e-local -i, $(hostname) -e katello_version=nightly -e foreman_installer_skip_installer=True playbooks/katello.yml  
run katello installer:
```

...

```
foreman-installer --scenario katello -v\  
--foreman-initial-admin-password="changeme" \  
--disable-system-checks \  
--foreman-proxy-dns="true" \  
--foreman-proxy-dns-interface="eth0" \

Thanks! It looks like the issue's resolved. The installer now passes with no errors.
