Pull request:	
Description	
Use the docs here to configure Pulp3 to use Auth provided by apache https://docs.pulpproject.org/en/3.0/nightly/installation/authentication.html#webserver-auth	
In the case of apache forwarding requests to the pulp wsgi if you're using mod_wsgi Pulp's defaults should work with REMOTE_USER in the WSGI environment. If you're using a reverse proxy, you'll need to configure Pulp to trust the header submitted from apache. For that, see the reverse proxy docs https://docs.pulpproject.org/en/3.0/nightly/installation/authentication.html#webserver-auth-with-reverse-proxy

- Description updated

adding some details on how katello can use Pulp's auth

#3 - 06/17/2019 11:37 PM - Brian Bouterse

The pulp installer now supports a setting that you can use to set this variable:

<https://github.com/pulp/ansible-pulp/pull/121#issuecomment-502782283>

See pulp_remote_user_environ_name at <https://github.com/pulp/ansible-pulp/tree/master/roles/pulp#role-variables>

- *Status changed from New to Duplicate*

Looks like this wasn't tracked in the main tracker ([#28736](#)) and missed. However, as part of [#28904](#) this has already been done.
