| Bugzilla link: | 1770646 | Red Hat JIRA: |
| Pull request: | https://github.com/theforeman/foreman-installer/pull/432 | |
| Description | | |
| Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1770646 | | |
| Description of problem: | | |
| BZ#1749233 is going to set log_min_duration_statement=1000 for PostgreSQL by default. However, this has a possible side effect on a large deployment where /var/lib/pgsql is mounted separately. The /var/lib/pgsql can be easily filled up when slow queries are identified. For example, a slow query for selecting facts could consume a large space when there are many facts on a host. | | |
| Expected results: | | |
| A reasonable log_rotation_size should be set to prevent /var/lib/pgsql being filled up. | | |
