Description	
<p>I'm trying to setup foreman + ansible on any distro that it will work on, but I'm having trouble on all of those I've tried (Ubuntu Bionic 18.04, Fedora 31 and CentOS 7).</p> <p>Ubuntu 18.04 got me the furthest (actually brought up the web UI), but I was blocked from installing ansible due to some ruby conflict about futures -- another issue mentioned it's better to try one of the RedHat based distros, so I thought I'd try CentOS, but I'm blocked even sooner.</p> <p>I've setup an install using the CentOS-7-x86_64-DVD-1908 iso, and freshly ran the commands from the quickstart here: https://theforeman.org/manuals/1.24/quickstart_guide.html, after selecting "CentOS, Scientific Linux or Oracle Linux 7". Repeating them here in case it changes:</p> <pre>sudo yum -y install https://yum.puppet.com/puppet6-release-el-7.noarch.rpm sudo yum -y install http://dl.fedoraproject.org/pub/epel/epel-release-latest-7.noarch.rpm sudo yum -y install https://yum.theforeman.org/releases/1.24/el7/x86_64/foreman-release.rpm sudo foreman-installer</pre> <p>This leaves me with something like this:</p> <pre>Preparing installation Done Success! * Foreman is running at https://foreman.mydomain.com Initial credentials are admin / randopasswd * Foreman Proxy is running at https://foreman.mydomain.com:8443 * Puppetmaster is running at port 8140 The full log is at /var/log/foreman-installer/foreman.log</pre> <p>However navigating to the site in question leaves me with a connection time out. (notably, following the same steps in Ubuntu got me to the website at least).</p> <pre>hostname -f</pre> shows my full domain name (foreman.mydomain.com) <p>Are there any other steps to go about doing this?</p>

what does the log say?

- Status changed from New to Need more information

Is there perhaps a Firewall in the way? Does the DNS also correctly resolve on the client?

This is actually what turned out to be the problem. I needed to disable firewalld I believe to make it work.

Unfortunately then the ansible plugin failed to install due to a missing .so if I recall so I punted on installing foreman at this time. I can probably close this bug, I can re-open another one if I ever get back to foreman + ansible.
