Description	
<p>Current state is there is a Kafo feature called checks/ to provide "system" checks before the installation runs. There are also hooks/ that provide similar functionality, e.g.</p> <p>https://github.com/theforeman/foreman-installer/blob/develop/katello/hooks/pre/15-check_java.rb https://github.com/theforeman/foreman-installer/blob/develop/katello/hooks/pre/15-check-disk.rb https://github.com/theforeman/foreman-installer/blob/develop/katello/hooks/pre_validations/10-check_foreman_proxy_pulp.rb</p> <p>The hooks concept provides more access to tools, and related data such as input parameters and the answers file than does the checks/ directory. These two should be re-conciled into hooks.</p> <p>Possible ideas:</p> <ul style="list-style-type: none">• create a dedicated checks/ hook phase to make it obvious
