Description		
Hello, I am receiving following error after I installed foreman on red-hot 7. This is when I try to create the location for the first time. "Oops, we're sorry but something went wrong The single-table inheritance mechanism failed to locate the subclass: 'JobTemplate'. This error is raised because the column 'type' is reserved for storing the class in case of inheritance. Please rename this column if you didn't intend it to be used for storing the inheritance class or overwrite Template.inheritance_column to use another column for that information."		

History

#1 - 05/22/2020 10:56 AM - Ewoud Kohl van Wijngaarden

- Priority changed from Urgent to Normal

This happens during the database migration. To know what's actually the problem we need the versions you're installing and which plugin(s) might be enabled. Ideally also an error log.

As a general note, <https://community.theforeman.org/c/support/10> typically has more visibility by non-installer people.

#2 - 05/25/2020 01:35 AM - sailesh bajracharya

- Priority changed from Normal to High

Hi There,

I am new to foreman and just trying to install and configure it. i have not done the database migration in the server that i am configuring. Can you please help?

following is the log:

ActiveRecord::SubclassNotFound

The single-table inheritance mechanism failed to locate the subclass: 'JobTemplate'. This error is raised because the column 'type' is reserved for storing the class in case of inheritance. Please rename this column if you didn't intend it to be used for storing the inheritance class or overwrite Template.inheritance_column to use another column for that information.
