Target version:	
Difficulty:	Fixed in Releases:
Triaged: No	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request: https://github.com/foreman-smart-proxy/pull/771	
Description	
<p>In #26591 the legacy provider was dropped. Since then, there is only one provider. The provider code was kept since it didn't need any changes to configuration files. However, having a module with just a single provider is complex. Both from a code perspective and as an admin.</p> <p>The implications are that the puppet.yaml and puppet_proxy_puppet_api.yaml files are merged (after being split in #13667). This means installer and manual updates are needed to reflect this.</p>
