Pull request:	
Description	
<p>Currently kafo works the UNIX way - silence if no params are provided, which is cool, but for the huge installer I think we can print something.</p> <p>When puppet returns OK, then we should output something like:</p> <pre>Installation was successful. You can now login at http://host/foreman</pre> <p>If there was an error, we should print something like:</p> <pre>Installation was NOT successful. Please search /var/log/foreman-installer/foreman-installer.log for ERRORS</pre>

Merge pull request #67 from GregSutcliffe/develop

Fixes #3131 - Output information at the end of the foreman-installer

History

#1 - 09/20/2013 01:00 PM - Greg Sutcliffe

I think this is a job for the foreman-installer script - perhaps Kafo could return a hash of interesting data for the frontend to use as it likes?

#2 - 09/20/2013 03:27 PM - Lukas Zapletal

I think kafo is the right place. It also knows the log file from kafo configuration. Let's wait for Marek.

#3 - 09/25/2013 07:16 AM - Lukas Zapletal

- Priority changed from Normal to Urgent

- Target version set to 1.3.0

This is critical bug for 1.3. If the configuration fails, there is no output. We need to print out at least there was an error, preferably all the ERROR messages.

#4 - 09/26/2013 10:53 AM - Greg Sutcliffe

Why would Kafo, a generic library for building application installers, print a message specific to the Foreman Installer? I think KafoConfigure.run (which is called in /usr/bin/foreman-installer) needs to return some useful data (such as the number of errors, etc) and the the foreman-installer script can decide what to do with it. Something like

```
CONFIG_FILE = "/usr/share/foreman-installer/config/foreman-installer.yaml"
```

```
result = KafoConfigure.run
if result[:exitstatus] == 0
  url = YAML.load_file(CONFIG_FILE)
  puts "Success! You can login a https://#{url}"
else
  puts "Installation not successful - there were #{result[:num_errors]} errors - see /var/log/foreman-installer for more detail"
end
exit result[:exitstatus]
```

This would allow the installer script to interpret the results from Kafo in any way it chooses.

#5 - 09/26/2013 11:49 AM - Greg Sutcliffe

- Project changed from Kafo to Installer
- Assignee set to Greg Sutcliffe

We can do this with the data Kafo returns to us today, doing it now.

#6 - 09/26/2013 12:36 PM - Marek Hulán

Also note that with progress bar you'll see the result so you don't need to hack foreman-installer itself.

#7 - 09/26/2013 05:09 PM - Greg Sutcliffe

- Status changed from New to Ready For Testing

Yeah, I'm fine with the puppet output coming from Kafo (progress bar, debug logs, etc). It's the project-specific text which should be kept to the wrapper.
