Revision 5a171444 - 05/20/2021 11:40 AM - Eric Helms

Fixes #32506: Add an nssdb_certificate type and provider

This adds a type for managing NSS database certificates (and private keys) within an NSS database. This new type reduces the number of intermediary entities that have to be created, for example the pkcs12 export, and reduces the overall Puppet code required. This type aims to provide a clean interface to managing NSS database certificates and ensure that the NSS database is in sync with the certificates being managed.

Revision 47db06c5 - 05/24/2021 09:18 PM - Eric Helms

Fixes #32506: Add keystore puppet provider type

This allows creating and managing a PKCS12 based keystore that is initially empty. This allows managing the permissions and ownership of the keystore separately from any certificates within it.

Revision 904cfd15 - 05/25/2021 07:16 PM - Ewoud Kohl van Wijngaarden

Refs #32506 - Avoid in place modification of array

In 47db06c5fd01fba4e06af5325470c8c146074bba a new keystore provider was added. This modifies metaparams in place which can have side effects. This patch changes it to not need it.
