<b>Pull request:</b>	<a href="https://github.com/theforeman/puppet-pulpcore/pull/206">https://github.com/theforeman/puppet-pulpcore/pull/206</a> , <a href="https://github.com/theforeman/puppet-pulpcore/pull/207">https://github.com/theforeman/puppet-pulpcore/pull/207</a>	

#### Description

With Pulpcore 3.14, Redis will only be required by Pulpcore when one of the following features is enabled:

- `use_rq_tasking_system` (older tasking system with RQ worker type, no longer default)
- Pulpcore's new content caching feature (not yet enabled)

While Redis is still required on Foreman server for Dynflow, due to these changes Redis may not be required for Content Proxy Server.

Therefore there should be an option to enable or disable (default enable) management of the Redis deployment in puppet-pulpcore, so that the Capsule scenario can skip deploying Redis when not required by the enabled Pulpcore features.
