Pull request:	
Description Starting in pulpcore 3.15, certain fields will be encrypted in the database: https://pulp.plan.io/issues/8192 Pulp uses a fernet key to encrypt these fields. It should be a string of 32 url-safe base64-encoded bytes. The setting DB_ENCRYPTION_KEY points the key location (default is <code>/etc/pulp/certs/database_fields.symmetric.key</code>).
