Pull request:	https://github.com/theforeman/puppet-foreman_proxy/pull/705	
Description		
Currently the installer only supports a single domain (configurable via <code>--foreman-proxy-dns-zone</code>) but it's very useful to create multiple domains. Today this can be done via <code>custom-hiera.yaml</code> (using <code>dns::zones</code>) but if the <code>-dns-zone</code> option supports an array it'd also be solved.
