<b>Description</b>	
<p>We need a support for smart_proxy_host_reports plugin and configuration options: <a href="https://github.com/theforeman/smart_proxy_host_reports/blob/develop/settings.d/host_reports.yml.example">https://github.com/theforeman/smart_proxy_host_reports/blob/develop/settings.d/host_reports.yml.example</a></p> <p>Required configuration options:</p> <ul style="list-style-type: none"><li>* keep_reports (if reports should be kept on proxy for recording purposes)<ul style="list-style-type: none"><li>• reported_proxy_hostname (must be set to FQDN by default)<ul style="list-style-type: none"><li>* spool_dir (spool directory, must be set to the default packaged /var/lib/foreman-proxy/host_reports)</li></ul></li></ul></li></ul> <p>Other options are meant for development and debugging and are not needed to be expose via the installer.</p> <p>Since this plugin will replace core reports functionality, I propose to be enabled by default for all scenarios.</p>
