Pull request:	
Description	
<p>Currently Foreman uses +%Y%m%d%H%M%S and Katello uses +%y%m%d%H%M%S. Historically Kafo has recommended the latter but the former uses complete timestamps, which makes them easier to recognize. It also uses underscores which is generally recommended for Ruby files.</p> <p>To change this, the helper (bin/create-migration) should be modified.</p> <p>Then all existing hooks should be renamed and a migration introduced to modified the applied file.</p>
