Description		
<p>The puppetlabs-apache puppet module used by the foreman-installer installs Apache httpd with a set of default Apache modules that may not all be necessary for a Katello deployment</p> <p>The purpose of this card is to pare those Apache modules down to a reasonable minimum set and allow the user to opt in to enabling additional Apache modules which they desire.</p>

Fixes #34590 - Enable only minimum apache modules

The puppetlabs-apache module installs Apache httpd with a set of default Apache modules, some of which are not necessary for our use case. This commit reduces that set of Apache modules to a minimum, by setting ``apache::default_mods: false`` in `config/foreman.hiera/common.yaml`. The user can enable additional modules if desired by overriding ``apache::default_mods`` in `custom-hiera.yaml` with a list of Apache modules. For more information, see documentation for puppetlabs-apache.
