Description

By default Apache doesn't use HTTP/2 (https://httpd.apache.org/docs/current/en/mod/core.html#protocols), but it can be enabled. HTTP/2 is a more efficient protocol, especially when serving multiple files.

Fixes #35631 - Enable HTTP/2 by default

Apache doesn't load HTTP/2 by default since it's incompatible with the prefork MPM. We use the event MPM where it should work. Enabling HTTP/2 allows clients to retrieve resources in parallel which means pages load faster.
