Triaged:	Yes	Found in Releases:
Bugzilla link:		Red Hat JIRA:
Pull request:	https://github.com/theforeman/puppet-puppetserver_foreman/pull/25	
Description		
We filter out "Finished catalog run in x.y seconds" but somewhere between Puppet report format version 3 and 6 the message changed to "Applied catalog in x.y seconds". This is then stored in the DB while it's also reported as a metric. It should be filtered out again.

Fixes #35684 - Drop Applied catalog lines

In the past we dropped the line which stated how log catalog application took since there's a metric for this. This was done by matching the content, but the content changed somewhere between report version 3 and 6.

This saves a lot of redundant messages in the Foreman database. An uneventful report will now have no messages at all.

- Fixed in Releases 3.5.0 added

#3 - 12/05/2022 05:14 PM - Ewoud Kohl van Wijngaarden

Looks like this caused a regression: if there is no log entry, Foreman can't determine the source of the report. See <https://community.theforeman.org/t/identify-config-report-origin/31465> for more details.

Hello,

related to this ticket - I run Puppet 5 and Foreman 3.5.

With this change "Applied catalog in x.y seconds" are indeed not displayed in Foreman Puppet reports, however the Report Status still shows 1 applied event -> hosts fall into the "Hosts that had performed modifications without error" when they have not done any real changes.

Any tips what to do with this? Some global "report_status["applied"] -= 1" ? Or decrease of the counter when "if log.message =~ /^(Finished catalog run|Applied catalog) in \d+\.\d+ seconds\$/" is triggered?

I know Puppet 5 is no longer supported from Foreman's side, but I have no way how to verify if it applies only to this older version.

Thank you.
