<b>Description</b> currently using version ~2.2.4 in [1] which is the latest of v2 in case we will want to migrate to v3, there is this guide that might be useful [2] where they mention a migrating tool [3]  [1] <a href="https://github.com/foreman/foreman-js/blob/dc8bbd0b892c4b6bd74aa78a783e0f8884d5262b/packages/vendor-core/package.json#L54">https://github.com/foreman/foreman-js/blob/dc8bbd0b892c4b6bd74aa78a783e0f8884d5262b/packages/vendor-core/package.json#L54</a> [2] <a href="https://jquery.com/upgrade-guide/3.0/">https://jquery.com/upgrade-guide/3.0/</a> [3] <a href="https://github.com/jquery/jquery-migrate/#README">https://github.com/jquery/jquery-migrate/#README</a>	

#### History

- Category set to JavaScript stack

I'll also add the context that long term we want to drop jQuery as a dependency, so we can also encourage people to move away from it. The biggest challenge is the host form, which heavily relies on it. Still: consider moving away from jquery if possible, rather than investing heavily into jQuery 3 compatibility.
