

Smart Proxy - Bug #36242

BMC with IPM providerl: Can't set UEFI PXE, i.e. "chassis bootdev pxe options=efiboot"

03/28/2023 05:36 PM - Oliver Freyermuth

Pull request:	
Description	
Modern systems with only UEFI activated (i.e. no PXE legacy boot) do not respond to:	
<pre>ipmitool -e ^ -I lanplus -H myhost.ipmi -U ADMIN -P ADMIN chassis bootdev pxe</pre>	
but require the command:	
<pre>ipmitool -e ^ -I lanplus -H myhost.ipmi -U ADMIN -P ADMIN chassis bootdev pxe options=efiboot</pre>	
Foreman's BMC Smart Proxy currently always uses the former and has no possibility to switch to the latter for a given host.
