#### Description

On a freshly installed foreman I cannot install salt. Installation fails when creating foreman config with the following error message:

```
2024-01-11 14:30:05 [ERROR ] [configure] Cannot create /etc/salt/master.d; parent directory /etc/salt does not exist
2024-01-11 14:30:05 [ERROR ] [configure] /Stage[main]/Foreman_proxy::Plugin::Salt/File[/etc/salt/master.d]/ensure: change from 'absent' to 'directory' failed: Cannot create /etc/salt/master.d; parent directory /etc/salt does not exist
```

Both `/etc/salt` and `/etc/salt/master.d` are available after package installation (`rubygem-smart_proxy_salt`), so it all requires resource ordering in puppet.

As a workaround I can simply run foreman-installer a second time.
