Triaged:	Yes	Found in Releases:
Bugzilla link:		Red Hat JIRA:
Pull request:	https://github.com/foreman/foreman/pull/10006	
Description		
Some of our STI models (host and subnet) have redefined initialization method signature, which cause failures in code logic due to Ruby 3.0 more strict way of dealing with keyword arguments. As a first step we must to comply with Rails' model initialization method signature. As a second step, we must review app/models/host.rb module's method_missing stub to accept keyword arguments to be able to answer and delegate different calls with different signatures. Without this, we can't migrate to Ruby 3.
