Bugzilla link: 1180666	Red Hat JIRA:
Pull request:	
Description We need to deploy this setting in the proxy YAML config file: :foreman_url: https://FODN ABRT proxy plugin is the first plugin that relies on this. Since this is now supported plugin I am giving this a priority to get some attention for the next sprint planning.

ABRT proxy plugin is the first plugin that relies on this.

I believe the chef plugin needs this as well.

- Priority changed from Normal to High

This is now needed by discovery proxy plugin as well. Boosting priority a bit.

What is the best way to implement this please? If it's easy, let's just do it right away. Should we detect the foreman_url from fqdn?

#5 - 12/09/2014 10:19 AM - Lukas Zapletal

- Related to Bug #8372: Make puppet ssl certificate+key that is used to authenticate against foreman available to the smart-proxy added

#6 - 12/09/2014 10:38 AM - Ewoud Kohl van Wijngaarden

That is the easiest. <https://github.com/theforeman/puppet-foreman/blob/master/manifests/params.pp#L5> does the same. Then users who deploy it by default at least get a sane install.

#7 - 12/09/2014 10:40 AM - Dominic Cleal

https://github.com/theforeman/puppet-foreman_proxy/blob/master/manifests/params.pp#L174-L175 :)

#8 - 12/09/2014 10:45 AM - Ewoud Kohl van Wijngaarden

Then it's just a matter of using it in the template :)
