Description		
<p>Many of the assumptions that worked just fine before will not work when puppet enterprise is installed. This is due to the fact that ruby is now installed under /opt/puppet/lib.</p> <p>I will try and go through this and make some corrections but it may need to be forked into a PE module.</p> <pre>::::::::::::: reports.pp ::::::::::::: # please follow the instructions at: http://theforeman.org/wiki/foreman/Puppet_Reports class foreman::reports { # directory where your puppet is installed \$puppet_basedir = \$operatingsystem ? { default => "/usr/lib/ruby/1.8/puppet", "CentOs" => "/usr/lib/ruby/site_ruby/1.8/puppet", "RedHat" => "/usr/lib/ruby/site_ruby/1.8/puppet", } }</pre>		

History

#1 - 05/04/2011 07:39 AM - Ohad Levy

- Tracker changed from Bug to Support
- Project changed from Foreman to Installer

#2 - 10/20/2011 02:10 PM - Ohad Levy

recent modifications now allow the user to define the paths for in the params file.

#3 - 06/17/2012 06:58 AM - Ohad Levy

- Status changed from New to Closed
