Description	
Hey all .	
I've been added 'customization_spec' in this file : /usr/share/foreman/app/models/compute_resources/foreman/model/vmware.rb to send custom ip , hostname to VMware clone (from template) .	
With static details like :	
<pre>customization_spec' => { 'domain' => "mobimate.local", 'hostname' => args[:name].split('.',2)[0], 'ipsettings' => { 'ip' => "xxx.xxx.xxx.xxx", 'gateway' => ["xxx.xxx.xxx.xxx"], 'subnetMask' => "xxx.xxx.xxx.xxx", }</pre>	
Everything is working fine.	
I would like to know where is the View that we can get the IP that foreman automatically generated I need to pass the ip to the ip variable in the customization_spec.	
Thanks , Amit Daniel

normally, its host.ip? BTW: the mailing list is much better medium for this kind of queries.

Hey Ohad ,

Thanks for your answer .
Still i can't get the host.ip.

```
'customization_spec' => {  
'domain' => "mobimate.local",  
'hostname' => args[:name].split('.',2)[0],  
'ipsettings' => {  
  * 'ip' => host.ip ,  
  • 'gateway' => ["xxx"],  
    'subnetMask' => "xxx",  
  },  
}
```

are you sure in the ip i just need to add host.ip ?

Thanks ,
